Keep browsers alive with session reconnects

Switch back and forth between browsers by using reconnects to keep a process open.

Custom machine setup

Enterprise users can specify details such as GPUs, operating systems and cloud providers.

Supports Playwright and Puppeteer

Connect your Puppeteer or Playwright script with a quick change in endpoint.

Use your existing scripts with a quick connection change

Puppeteer

Change the launch method to connect and specify it to use browserless.

Playwright

REST APIs

See the Docs

```
// From inside your Node application
import puppeteer from 'puppeteer';
```

```
// The rest of your script remains the same
const page = await browser.newPage();
await page.goto('https://example.com/');
await page.screenshot({ path: 'screenshot.png' });
page.close();
```

Monitor the health of your automations

Deploy as code, monitor as a GUI.

- **Request metrics**
See a graph and numbers for successes, errors, timeouts and queue.
- **Worker health**
Enterprise plans can see the CPU and memory of their workers.
- **Debugger**
Use our debugger to watch your scripts run and catch errors.

If you have ever need help, you can then reach out to support who typically reply in under an hour.

Hear from our users

Firsthand testimonials and feedback directly from our valued users

"We were hosting our own Puppeteer-driven smoke testing service, which required specialized operational attention to maintain and scale. We began looking for third-party hosted solutions so that we could focus our attention on building and supporting our core products, and Browserless fit the bill."

Christopher Zhen

Software Engineer, [Samsara](#)

"Browserless helped us focus on the problem we were trying to solve, and less on scaling an automation infrastructure. Browserless's developer focused approach has been a key to us bringing our product to market at the speed we were able to do so. Joel and team are some of the most customer-centric partners I've worked with."

Scott Weinert

Co-Founder & CTO, [Atomic](#)
